ABSTRACT

This research uses qualitative or inductive observational and descriptive research methods to look at the phenomenon of demand for goods and services in the Finance system in application for long-distance applications via the Internet for good accounting administrative distribution of supply to evenly distribute needs. Researchers finally found a teaching solution to maximize the distribution of needs using remote applications via the internet because this is a practical step for goods and services needed. The development of the Internet for the purpose of Purchasing and Marketing began in 1996, namely a media called Dyviacom Internet proceeded in Purchasing and Marketing transactions using the Internet followed by Kaskus, Blibli, Tokopedia and Bukalapak and so on, so that it was valid until 2015 until the present time, which had an influence on long-distance sales and purchases to deliver effective finance output and excellent service delivered in teaching in class for entrepreneur candidates.

INTRODUCTION

The increasingly rapid development of technology has had an important impact on the digital business industry, replacing the role of manual business in terms of distributing goods and services, quoted from the Journal of Technology Adoption and Information Systems entitled The Influence of Using Online Purchasing and Marketing Sites proceeded in remotely by the author Nikmah Amalia Harahap et al. page 1 in 2023, causing many changes in ordering and payment methods which initially used face-to-face methods but now use long-distance or online methods.

The development of the era that demands the idealism of society to utilize digital networks to precede in transactions effectively makes Internet users provide opportunities for people to precede in transactions using the Internet network so that Purchasing and Marketing transactions can be proceeded in easily and planned and practically and do not take time to meet face to face with consumers who will precede in the Purchasing and Marketing transactions that will be preceded in.

Districts and Cities in the Archipelago are broad territorial arrangements and are spatial distribution areas where the territory is a stretch of territory consisting of urban and rural areas so that the distribution of Purchasing and Marketing of goods and services is uneven, therefore most people in rural areas are less able to obtain the types of goods that are in urban or city areas, so that an even distribution is needed using long-distance Purchasing and Marketing in relation to the fulfillment of goods and services.

In reference to time-saving administrative activities related to public administration studies, the role of remote users is needed so that these users can be useful in terms of quality and sales effectively and easily according to William H Newman in his book *Administrative Action*, which states that administration has been defined as the guidance, leadership, and control of the effort of a group of individuals towards some common goals. In this explanation, it can be interpreted that administration is a collection of guidance and leadership as an effort in groups or individuals in order to achieve a goal in relation to digital distance.

Referred to Litchfield (1956:1) in his book *Notes of General Theory of Administration*, it is stated that Public Administration is a code regarding various parts related to the way of managing a region with an economic system with cyber substitute regional media, namely with a long-distance system, which is one of the administrative principles used to make energy and effort more effective in using digital distance effectively without consuming time.

From the opinions of the two experts that have been presented, it can be interpreted that users with media using Digital Distance media are a basic principle of public administration, namely a way to facilitate and provide appropriate utilization in carrying out a task and expediting it well. Remote Media utilizing Digital Distance can also provide good quality Digital Distance because it is effective.

One of the benefits of these sales is that, in addition to being able to meet the market share regarding the need for goods and services with good and clean quantity and quality, it can also provide information to the public about saving time so that not all of it is used by users using face-to-face media but can also be used as media in the form of optimal Digitalization Distance.

This media can also increase product quality according to the accurate Digitalization Distance from the previous Digitalization Distance, reduce costs, manual labor, and simplify work practically because everything is done using media that utilizes the Digitalization Distance.

In using the media, the Media User Community utilizes the Digitalization Distance or the Activities of the Media User Community utilize the Digitalization Distance from the regional area where the media will be implemented in the cycle area to implement for media remotely, then the User Community chooses the Remote Media that suits the user's tastes related to Long Distance buying and selling.

Evaluation of the Long Distance cycle and qualification of Internet media will be implement for periodically together with the community who have the same interest in the use of Long Distance media in the Territory of the Republic of Indonesia in relation to the users of the Digitalization Distance, if there is no display feature that is invalid then it will be implement for by the user in the same form as E M or Effective Marketing as the right sales basis for its use.

This system is implemented and planned by the users of Long Distance media utilizing the Digitalization Distance of the Finance State region. The Use of Long Distance Media utilizing the Digitalization Distance of the region by paying attention to the conditions of the surrounding area, to obtain the correct Digitalization Distance results, the user must be sensitive in monitoring the Digitalization Distance in a standardized form in terms of users with the Digitalization Distance media in the context of the Use of Long Distance Media utilizing the Digitalization Distance remotely.

Teaching and learning activities in the classroom that occur under the guidance of the Instructor towards the Students is a process that begins with preparation. And that preparation must be arranged well and systematically before learning begins. The learning design that is arranged for teaching, begins with a reference called a syllabus, and the existence of a syllabus is arranged based on the basic principles of the curriculum. Before moving on to discussing the principles of learning, it is fundamentally necessary to know the definition of the curriculum as a basis for compiling learning plans for Finance Advisor about training online entrepreneurs for finance stability.

The curriculum is different from the syllabus, the curriculum is a general reference for all subjects in various disciplines, while the syllabus is an elaboration of the reference. According to Webster New International 1953 in Rahayu 2006; 1 Curriculum is a specified course of study, in a Institution or college as one leading to a degree therefore Curriculum should state about the Presentation Practice in the Site.

In learning, a way is needed so that learners want to continue learning goals optimally, rather than just continuing to learn without knowing the meaning of learning, because when learning, learners must know the contents of the learning goals that will be taught, the definition of learning as the process by which an activity originality or is changed through responding to a situation (Hilgard in Mulyati: 1962: 252) means that the learning process must be based on or in accordance with the situation that responds continuously for the finance training.

The Function of Public Administration in this case is within the scope of the correct and concise Digitalization Distance pattern to use Digitalization Distance with productive results with results that provide good results, other Remote media that do not pay attention to the goodness factor and practical level in users are very different from users if it is done with the correct and structured Digitalization Distance media.

Instructor Influence Domination affects Student understanding affective material is presumably affected by how the Instructor explains the importance of Finance Stability a scope appreciation of their friends with different kinds of beliefs and races, students are followed to regard respect and compensate high value in providing savory responses for the heterogeneity for their friends by not insulting and discriminating one another with Instructor supervision in watching their activity at classroom during the learning process as the students

interact and communicate not involving tribes and religion disrespects during the learning process.

Students in this case are objects of activity attitude learning not pedagogical learning for the matter. The Learning Resource is required to assemble the structure of the Supervision system as the Instructor accommodates value by supervising student manners in class when they have a lesson during the progress of study activity as the taxonomy states intact in elaborate Accounting in united Finance Principle and Learning Resources to create Finance Stability in class.

Learning Resources is a centralized activity consisting of the Instructor, students' equipment and other special facilities to demonstrate the need for production, training and direction of instructional materials as well as development and service sections planned for curriculum and teaching in educational institutions in general with the matter of education in Indonesia.

Institution Centered Learning Resources at Institutions or office make it easier for students to access information. And everything is focused on one person in charge and the counselors involved. Referred to Rahayu 2006; 12 - 16 organizing the curriculum horizontally is a form of preparing learning materials that will be delivered to students. Meanwhile, according to S. Nasution 1980, there are three types of horizontal curriculum distribution, namely Separate-Subject-Curriculum, correlated-curriculum, and Integrated-Curriculum.

1. Separate-Subject-Curriculum is a curriculum that is structured around subjects that are separate from each other and cannot be linked to each other
2. Correlated-curriculum is a curriculum that is arranged with related subjects so that they become one unit.
3. Integrated-Curriculum is a curriculum arranged in subjects where each other influences each other

In that structure, the emphasis is on the place for the teaching and learning process, referred to Winarno Surahmad in Rahayu 2006; 20 stated that the curriculum is structured using a class system or without classes, or both, according to the distribution of time and the distribution of subjects according to class level.

The primary advantage of centralized learning is that it frees students from the specific doctrines and teachings of each Institution. Centralized services help counselors provide centralized direction to the types of levels below with integrated curriculum solution to teach the candidates how to implement effective finance solution to spare outcome with excellent service in their private company.

Referred to Stanford, students can socialize more directly and freely, namely learning ahead from the Instructor therefore the integrated curriculum as the Instructor could supervise students is a matter of the way as students maintain to create their good attitude at Institution instead of direct cognitive teaching at Institution named centralized learning as explained to provide Instructor as example and figure at Institution.

The users of Remote media utilize the Digitalization Distance in the Territory of the Republic of Indonesia to Implement Remote supervision through perfect achievements because users through Remote media utilize the Digitalization Distance which has high quality even with the convenience of the Remote basis with the Digitalization Distance media, the Digitalization Distance can be influenced well by other forms but Remote supervision

must also be carried out because the Remote media requires the power to grow in users quickly so if it grows it must be addressed immediately.

The Indonesian Bureaucratic Region Party for Remote Media Supervision utilizes the Digitalization Distance relying on the most sophisticated Internet Technology in implementing the Use of Remote Media utilizing the Digitalization Distance to gain public trust by gaining high trust from the public, then the party needs to achieve minimum performance in building public trust regarding how to handle public complaints regarding the inaccuracy of the Digitalization Distance caused by pests and inaccuracies in using to utilize this in the form of optimal users, so that the distrust of the user community towards the user body of the Digitalization Distance Digitalization Distance of the Indonesian State can become Relatively developed in planning, monitoring activities and user evaluation in terms of transactions via the Internet.

METHODS

This Research is designed based on literature and reference from books, it allows researchers to define characters how hypothesis is concluded by applying the concept of research with certain steps and procedures as their way of the role of Public Administration and Accounting Scope with observation instrument with literature approach. In this chapter, the discussion depends on the reliable and cohesion from the explaining. Therefore, there is one basic question reflected from the previous paragraph. How the role observation instrument with qualitative methods with literature review in analyze Accounting Administrative Objectives of Users That objectives must be based on the objectives of actions related to carrying out administrative processes towards certain references according to the current context, and also administrative actions are required to see the context of existing media needs in fulfilling needs in agencies or regions that require users of Digital Distance media.

The Objective of this research is to know analyse about how is Natural Way strategy applied for standardized. The research analyzes about how the role of Accounting Administrative Objectives of Users That objectives must be based on the objectives of actions related to carrying out administrative processes towards certain references according to the current context, and also administrative actions are required to see the context of existing media needs in fulfilling needs in agencies or regions that require users of Digital Distance media.

The research is achieved to present and to support design in literature review strategy for maintaining about how scarecrow be applied for standardized. The Research applies Qualitative Methods in developing. How the role of Accounting Administrative Objectives of Users That objectives must be based on the objectives of actions related to carrying out administrative processes towards certain references according to the current context, and also administrative actions are required to see the context of existing media needs in fulfilling needs in agencies or regions that require users of Digital Distance media.

Meanwhile, The Design is measured at the end of domain as the students are able to characterize an action and Indication to create How the role of Public Administration and Human Resource Management of the Demand and Supply of the Accounting Administrative Objectives of Users That objectives must be based on the objectives of actions related to carrying out administrative processes towards certain references according to the current

context, and also administrative actions are required to see the context of existing media needs in fulfilling needs in agencies or regions that require users of Digital Distance media.

In a common way for any Indication to create affection for students all levels for nurturing nature by customizing the function of How the role of Public Administration and Accounting Purpose of teaching Materials for Online Micro Traders by Instructors referred to Kapoor et al in Leon (2018) with certain steps for observational design in teaching the candidates

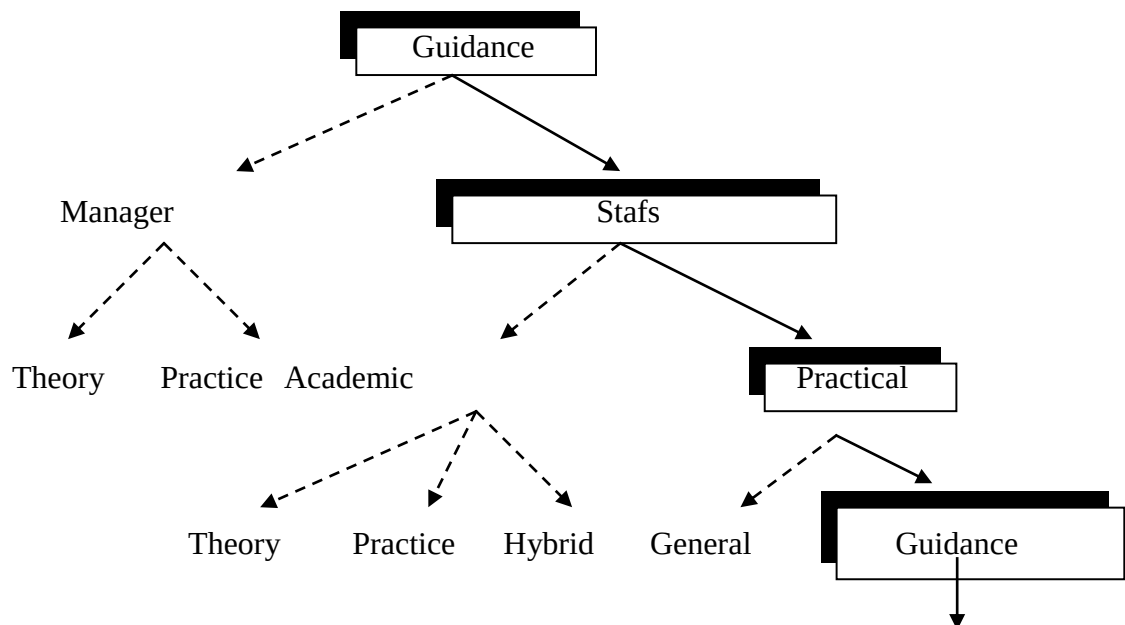

RESULTS AND DISCUSSION

The principles of Public Accounting Administration Online must adhere to the following development Gap Research as difficult to perform referred for Finance effectiveness in online context:

- A. User Administrative Objectives: Objectives refer on the purpose of actions related to refer administrative processes toward specific points in the current context. Administrative actions are also required to consider the context of existing media needs to meet the needs of agencies or regions requiring digital media users.
- B. The general principles of the transactional experience and their explanations are:
- C. Users of the Digital Distance must perform actions that enable them to achieve their success goals for service and excellent finance output.
- D. The user cycle must satisfy consumers using the Digital Distance in the form of quality goods and services.
- E. Administrative and cultivation transactional experiences must be in accordance with the purchasing power and usage of the Digital Distance media available in Indonesia. In the case of Remote Media Users utilizing the Digital Distance, this should be considered for service and excellent finance output.
- F. Therefore, in this sequence, Digital Distance users must be able to develop users according to the flow of needs, and also according to the needs of users continuously and sequentially in the territory requires transactional input of goods and services in large quantities and of good quality service and excellent finance output.

Table 1. The Syntax of Finance Stability Materials for Online Entrepreneurs

Personal Finance Design	The Benefits
A. Considering Nowadays Finance Condition	Improving Effectively Practice about providing, acquiring, and covering the company core of business.
B. Providing Purpose	Enhancing Control for High Debt, Bankruptcy, and Finance Dependency towards other Company.
C. Identifying and Evaluating Alternative Balance for The Purpose	Improving Effective Communication via Online with Customers
D. Evaluating Alternative with risk and Finance Consideration (Time Value of Money)	The Independence of Finance Anxiety for Future Consideration
E. Arranging and Implementing Finance Plan	Outcome Anticipation
F. Evaluating and Revising Finance Plan	Private Finance Purpose

Figure 1. The Concept of Research

CONCLUSION

The general principles of transactional experience for finance stability and their explanations are:

1. Digital Distance Users must do something that enables them to achieve their success goals for improving Effectively Practice about providing, acquiring, and covering the company core of business.

2. The user cycle must be able to provide satisfaction in terms of the usability of Digital Distance Consumers in the form of quality goods and services for Enhancing Control for High Debt, Bankruptcy, and Finance Dependency towards other Company.
3. Administrative and cultivation transactional experience must be in accordance with the level of purchasing power and use of the existing Digitalization Distance of Digitalization media in the territory of the Republic of Indonesia in terms of the Use of Remote Media utilizing the Digitalization Distance in improving Effective Communication via Online with Customers.
4. Transactional objectives must be presented with valid evidence of remote results about improving Effective Communication via Online with Customers .
5. Each remote experience in one period differs from the next as a safeguard against cyber fraud about The Independence of Finance Anxiety for Future Consideration.

As referred to western union which was built in 1856 as preceded for bankruptcy because not buying patent from Alexander Graham Bell in Telephone for communication then the finance conflict adherent that the company that it diverted the line into cellular and Electronic mails with thousand dollars for the franchise and some staffs and managers were intended to retire due that decrees of salary in that company in purchasing the scattered system

The relationship or connection between one user and another is what is meant by the organization of needs, namely that if the level of successful Remote experience is higher, the more trust is given to the Digital Distance pattern, but the lower the level of user experience, the lower the level of Remote trust related to the Remote cycle regulation.

The primary advantage of centralized learning is that it frees students from the specific doctrines and teachings of each Institution. Centralized services help counselors provide centralized direction to the types of levels below.

Referred to Stanford, students can socialize more directly and freely, namely learning ahead from the Instructor therefore the integrated curriculum as the Instructor could supervise students is a matter of the way as students maintain to create their good attitude at Institution instead of direct cognitive teaching at Institution named centralized learning as explained to provide Instructor as example and figure at Institution.

Therefore teacher at class should teach candidates for Considering Nowadays Finance Condition, Providing Purpose Identifying and Evaluating Alternative Balance for The Purpose Evaluating Alternative with risk and Finance Consideration (Time Value of Money), Arranging and Implementing Finance, Plan Evaluating and Revising Finance Plan for finance and excellent condition at company.

Further Research

Students in this case are objects of activity attitude learning not pedagogical learning for the matter. The Learning Resource is required to assemble the structure of the Supervision system as the Instructor accommodates value by supervising student manners in class when they have a lesson during the progress of study activity as the taxonomy states intact in elaborate Accounting in united Finance Principle and Learning Resources to create Finance Stability in class. Therefore there should be advance research for adequate implementation for the plan

Learning Resources is a centralized activity consisting of the Instructor, students' equipment and other special facilities to demonstrate the need for production, training and direction of instructional materials as well as development and service sections planned for

curriculum and teaching in educational institutions in general with the matter of education in Indonesia in Vocational Finance stability for Micro Company with online sustainability

CONFLICT OF INTEREST

There is no Conflict of interest in this Research as described below
